PULL STATION GUARDS

General Description

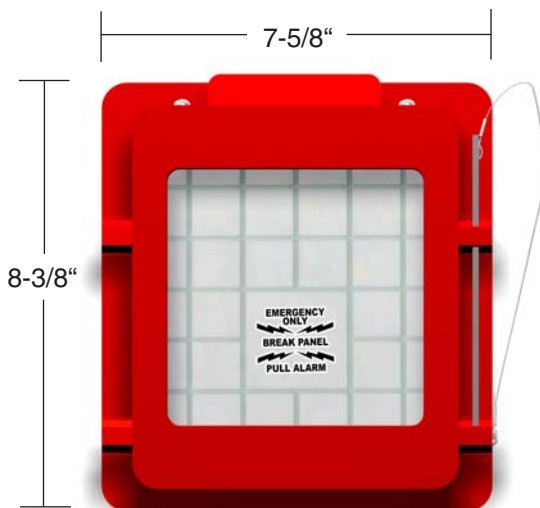

The Watchdog family of Pull Station covers come in a Break Panel or a Pull Door version for covering flush or surface mount pull stations.

Units are constructed of a durable red copolymer that will not rust, resists severe temperatures, stains and weather.

Break Panel units have an aluminum breaker bar attached to the cover with cable. Mounting slots are integrated into the unit for proper storing of the breaker bar when not in use.

Pull Door units require less than 5lbs. of pull pressure and the door swings down and out of the way, making it more ADA friendly.

Flush mount depth 2-1/4"
 Surface mount depth 3-3/4"

Break Glass model shown above.
NOTE: Dimensions are same for Pull Door models.
 All mounting screws are concealed.

Top Row: Flush Mounted / Bottom Row: Surface Mounted
 Left Column: Break Panel / Right Column: Pull Door
